

Lansing Patent Fence Machine

To the Agricultural Implement Dealers:

The Fence of the future will be the combined Wire and Picket Fence, not the common woven Fence, but a strong Fence that cannot sag.

The machine shown is the only one that will build a Fence that will not sag if the pickets shrink.

We stretch two or more heavy wires and fasten the pickets to them with the machine.

We make a machine that is so cheap that every farmer can afford to buy one and build his own Fence. The machine sells to the farmer for \$7.00. We desire to sell through the trade, and not direct to the farmer—and will send sample machine and section of fence on which to exhibit it, to one responsible dealer in each town at the wholesale price of the machine.

We want only one agent in each place.
